

Product Name: IMTRADE COUGAR SELECTIVE HERBICIDE
APVMA Approval No: 65273/149914

| | |
|-------------|------------------------------------|
| Label Name: | IMTRADE COUGAR SELECTIVE HERBICIDE |
|-------------|------------------------------------|

| | |
|------------------|---|
| Signal Headings: | DANGEROUS POISON KEEP OUT OF REACH OF CHILDREN READ SAFETY DIRECTIONS BEFORE OPENING OR USING |
|------------------|---|

| | |
|-------------------------|---|
| Constituent Statements: | ACTIVE CONSTITUENTS: 250 g/L BROMOXYNIL AS THE OCTANOATE ESTER 25 g/L DIFLUFENICAN LABEL A: SOLVENTS: 416 g/L LIQUID HYDROCARBON 150 g/L N-METHYL-2-PYRROLIDONE LABEL B: SOLVENTS: 424 g/L LIQUID HYDROCARBON 150 g/L N-METHYL-2-PYRROLIDONE |
|-------------------------|---|

| | |
|-----------------|------------------------|
| Mode of Action: | GROUP 6 12 HERBICIDE |
|-----------------|------------------------|

| | |
|----------------------|---|
| Statement of Claims: | For the control of certain broadleaf weeds in winter cereals and pastures as specified in the Directions for Use table. |
|----------------------|---|

| | |
|---------------|--------------|
| Net Contents: | 5 L - 1000 L |
|---------------|--------------|

| | |
|-------------|--|
| Restraints: | DO NOT apply if crops or weeds are stressed due to dry or excessively moist conditions DO NOT apply to crops under stress due to disease or insect damage. DO NOT apply to frost-affected crops or if frosts are imminent. DO NOT apply if heavy rain is expected within 4 hours. DO NOT apply with crop oils (cereals only). SPRAY DRIFT RESTRAINTS Specific definitions for terms used in this section of the label can be found at apvma.gov.au/spraydrift DO NOT allow bystanders to come into contact with the spray cloud. |
|-------------|--|

| | |
|--|---|
| | <p>DO NOT apply in a manner that may cause an unacceptable impact to native vegetation, agricultural crops, landscaped gardens and aquaculture production, or cause contamination of plant or livestock commodities, outside the application site from spray drift. Wherever possible, correctly use application equipment designed to reduce spray drift and apply when the wind direction is away from these sensitive areas.</p> <p>DO NOT apply unless the wind speed is between 3 and 20 kilometres per hour at the application site during the time of application.</p> <p>DO NOT apply if there are hazardous surface temperature inversion conditions present at the application site during the time of application. Surface temperature inversion conditions exist most evenings 1 to 2 hours before sunset and persist until 1 to 2 hours after sunrise.</p> |

|---------------------|--|
| Resistance Warning: | <p>RESISTANT WEEDS WARNING GROUP 6 12 HERBICIDE</p> <p>Imtrade Cougar Selective Herbicide is a member of the nitrile and nicotinanilide groups of herbicides. Imtrade Cougar Selective Herbicide is an inhibitor of photosynthesis at photosystem II and carotenoid biosynthesis. For weed resistance management Imtrade Cougar Selective Herbicide a Group 6, 12 Herbicide. Some naturally occurring weed biotypes resistant to Imtrade Cougar Selective Herbicide and other Group 6, 12 Herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by Imtrade Cougar Selective Herbicide or other Group 6, 12 Herbicides. Since the occurrence of resistant weeds is difficult to detect prior to use, Imtrade Australia Pty Ltd accepts no liability for any losses that may result from the failure of Imtrade Cougar Selective Herbicide to control resistant weeds.</p> |

| Precautions: | |
|--------------|--|

| | |
|--------------|--|
| Protections: | PROTECTION OF WILDLIFE, FISH CRUSTACEANS AND ENVIRONMENT |
|--------------|--|

| | |
|-------------------------|---|
| | Dangerous to fish. DO NOT contaminate streams, rivers or watercourses with the chemical or used containers. |
| Storage and Disposal: | <p>The method of disposal of the container depends on the container type. Read the Storage and Disposal instructions on the label that is attached to the container.</p> <p>This product must be stored in a locked room or place away from children, animals, food, feedstuffs, seed and fertilisers. Store in the closed, original container in a well-ventilated area. DO NOT store for prolonged periods in direct sunlight.</p> <p>All non-refillable containers (unless otherwise specified) Triple rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemical on-site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and deliver empty packaging for appropriate disposal to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. DO NOT burn empty containers and product. DO NOT re-use empty container for any other purpose.</p> <p>Envirodrum - Micro Matic Valve DO NOT tamper with the Micro Matic valve or the security seal. DO NOT contaminate the Envirodrum with water or any other foreign matter. After each use of the product please ensure that the Micro Matic coupler, delivery system and hoses are disconnected, triple rinsed with clean water and drained accordingly. When the contents of the Envirodrum have been used, please return the empty Envirodrum to the point of purchase.</p> <p>Refillable Containers Empty contents fully into application equipment. Close all valves and return to point of supply for refill or storage.</p> |
| Safety Directions: | Product is harmful if inhaled or swallowed. Will irritate the eyes, nose, throat and skin. Avoid inhaling spray mist. When preparing spray wear elbow-length PVC gloves and face-shield. If product in eyes, wash it out immediately with water. After use and before eating, drinking, smoking, wash hands, arms and face thoroughly with soap and water. After each day's use wash gloves, face-shield and contaminated clothing. |
| First Aid Instructions: | If poisoning occurs, contact a doctor or Poisons Information Centre (Phone Australia 13 11 26; New Zealand 0800 764 766). If swallowed, DO NOT induce vomiting. If in eyes, wash out immediately with water |
| First Aid Warnings: | |

| CROP | WEEDS CONTROLLED | STAGE OF WEED GROWTH | STATE | RATE/HA | CRITICAL COMMENTS |
|--|---|--|------------|---------|--|
| Wheat, Barley, Triticale, Cereal rye (including cereals undersown with clover and/or lucerne), and these cover crops in vineyards PASTURE Clover and/or lucerne based pasture (newly sown or established including cover crops in vineyards) | Wild Radish (<i>Raphanus raphanistrum</i>) | Up to 2 leaf stage and not more than 60mm in diameter and where weed density is less than 50 plants/m ² | WA only | 350 mL | CROP STAGE: Cereals 2 leaf to fully tillered (Zadock's Z12-29). Optimum results are achieved when sprayed at 4-8 weeks post-sowing. Warning: Intrade Cougar Selective Herbicide may cause transient crop yellowing of cereals. (Refer to “ Crop Tolerance ” section of General Instructions). Clover and Lucerne Application is recommended prior to the 8 th trifoliate leaf stage. Application can be made from the 1 st trifoliate leaf stage in Qld, NSW, ACT and Vic only. In other States applications prior to the 3 leaf stage may result in crop damage if seedlings are under stress and in sandy soils. DO NOT apply to annual medics. Warning: Intrade Cougar Selective Herbicide may affect growth and seed set of some varieties of clover and lucerne. (Refer to “ Crop Tolerance ” section of the General Instructions). COVER CROPS IN VINEYARDS: When using in vineyard situations, apply during vine dormancy only. Contact with vines must be avoided. Particular care should be taken if applied in late autumn or early spring, when vines may not be fully dormant. WEED STAGE: Apply from early post-emergence. APPLICATION: Apply when weeds are actively growing. Ensure thorough coverage of weeds. Where crop or weed density is high, increase water volume. In most situations the rate specified for each weed size will give satisfactory control. However, under certain conditions such as: <ul style="list-style-type: none"> • high crop and weed density, • late season germinations, • abnormal weed growth (including early flowering): higher rates of product (up to the maximum rate of application specified for that weed) may be required. |
| | Wild Mustard (<i>Sisymbrium</i> spp.), Wild Radish (<i>Raphanus raphanistrum</i>) | Up to 4 leaf stage and not more than 120mm in diameter | All States | 500 mL | |

**NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL
UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

General Instructions

- Imtrade Cougar Selective Herbicide is a post-emergence contact herbicide, which may provide residual control of wild radish up to 4 weeks after application.
- Apply Imtrade Cougar Selective Herbicide immediately after mixing. Do not allow to stand in the spray tank overnight.
- Optimum results will be obtained if good soil moisture exists at and after application and weeds are not stressed.
- Some pre-emergence herbicides, such as atrazine, can cause stress to certain crops resulting in an increase in crop damage when using this product. Crops which are particularly sensitive are lucerne and subterranean clover.

Temperature warning

DO NOT apply Imtrade Cougar Selective Herbicide if frosts are imminent. Frost causes stress on crops and weeds and could result in increased crop effects and/or decreased weed control. To ensure good results Imtrade Cougar Selective Herbicide should only be applied once the weeds and crop are no longer under stress from the frost conditions.

Avoid application when maximum daily temperatures above 20°C occur, or are likely to occur for a few days after application, as increased crop damage may result.

CROP TOLERANCE

Cereals

After application some transient crop yellowing may occur. This usually appears as yellow or white banding on leaves. Provided the crop is not under stress from pre-emergent herbicide, root disease, insect damage, frost, dry or excessively moist conditions, the development of the crop and subsequent growth will be unaffected.

Lucerne

Warning

The tolerance of lucerne varieties to Imtrade Cougar Selective Herbicide can vary with rate of application, soil type, crop health, stage of growth and degree of moisture and temperature stress. Imtrade Cougar Selective Herbicide may result in transient crop yellowing and suppression of growth with a resultant initial reduction in dry matter. For this reason we recommend application prior to the 8 trifoliate leaf stage. However, under normal growing conditions subsequent growth and seed yield should not be affected. Crop damage may be increased if rates higher than 500 mL/ha are used and in areas where spray overlapping has occurred.

Under normal growing conditions, the following lucerne varieties have shown acceptable levels of foliage tolerance to Imtrade Cougar Selective Herbicide applied at 500 mL/ha:

Hunter River, Nova and Dekalb 185.

Varieties not listed should be tested before using Imtrade Cougar Selective Herbicide over large areas. Consult your local Imtrade Australia representative for advice on specific varieties.

Subterranean Clover

Warning

The tolerance of subterranean clover varieties to Imtrade Cougar Selective Herbicide can vary with rate of application, soil type, crop health, stage of growth and degree of moisture and temperature stress. Imtrade Cougar Selective Herbicide may result in transient crop yellowing and suppression of growth with an initial reduction in dry matter. For this reason we recommend application prior to the 8 trifoliate leaf stage. However, under normal growing conditions subsequent growth and seed yield should not be affected. Crop damage may be increased if rates higher than 500 mL/ha are used and in areas where spray overlapping has occurred. Under normal growing conditions, the following varieties have shown acceptable levels of foliage tolerance to Imtrade Cougar Selective Herbicide applied at 500 mL/ha:

Daliak, Dalkeith, Denmark, Goulburn, Karridale, Leura, Mt. Baker, Nungarin, Rosedale, Seaton Park, Trikkala and Woogenellup.

The variety Junee has shown increased sensitivity to Imtrade Cougar Selective Herbicide so care should be taken if this variety is part of the pasture sward.

The effects of Imtrade Cougar Selective Herbicide on subterranean clover seed have been tested on the following varieties. Under normal growing conditions they show acceptable levels of tolerance to Imtrade Cougar Selective Herbicide applied at 500 mL/ha. However, higher rates may reduce seed yield under conditions of low weed pressure:

Denmark, Goulburn, Larissa, Nungarin, Seaton Park, Trikkala and Woogenellup.

Varieties not listed should be tested before using Imtrade Cougar Selective Herbicide over large areas. Consult your local Imtrade Australia representative for advice on specific varieties.

Other Clovers

Warning

The tolerance of clover varieties to Imtrade Cougar Selective Herbicide can vary with rate of application, soil type, crop health, stage of growth and degree of moisture and temperature stress. Imtrade Cougar Selective Herbicide may result in transient crop yellowing and suppression of growth with a resultant initial reduction in dry matter. For this reason we recommend application prior to the 8 trifoliate leaf stage. However, under normal growing conditions subsequent growth and seed yield should not be affected. Crop damage may be increased if rates higher than 500 mL/ha are used in areas where spray overlapping has occurred. The effect on seed yield of other clovers has not been determined.

The following varieties of clover have shown increased sensitivity to Imtrade Cougar Selective Herbicide:

Big Bee, Sacromonte (Berseen), Haifa (White), Zulu (Arrowleaf), Kyambro, Lupers and Maral (Persian).

Care should be exercised if these clovers are part of the pasture sward.

Varieties not listed should be tested before using Imtrade Cougar Selective Herbicide over large areas. Consult your local Imtrade representative for advice on specific varieties.

Subsequent Crops

To reduce effect on subsequent susceptible crops (e.g. canola), ensure thorough cultivation of soil prior to the sowing of these crops.

MIXING

To ensure even mixing, half fill the spray tank with clean water and add the required amount of product. Agitate thoroughly then add the remainder of the water. Agitate thoroughly while carrying out spray operations. Reseal part used container immediately after use.

APPLICATION

Boom Sprayer:

A minimum of 50L of water/ha should be used, however, for optimum results water rates of 70-100L/ha are recommended. Increase the water volume where weed infestation is heavy or crop cover is dense. Complete coverage of weeds is essential. Higher water volumes (up to 100L/ha) will ensure faster activity of the product on the weeds by may increase the symptoms of crop damage.

| Water Rate | 50 L/ha | 75 L/ha | 75L/ha |
|------------|-------------------------------|-------------------------------|-------------------------------|
| Nozzle | Hardi No. 10 or equivalent | Hardi No. 12 or equivalent | Hardi No. 14 or equivalent |
| Speed | 10 km/h | 10 km/h | 12km/h |
| Pressure | 240 kPa (2.4bar) | 220 kPa (2.2 bar) | 210 kPa (2.1 bar) |

Controlled Droplet Application (CDA)

Insufficient information is available to recommend the application of this product by CDA.

Warning

The rubber components present in some spraying units may be affected by exposure to the solvents in Imtrade Cougar Selective Herbicide. To reduce this risk it is recommended that the spray unit be thoroughly washed with a boom cleaner and fresh water after use.

Aircraft

Insufficient information is available to recommend the application of this product by air.

COMPATABILITY

When mixing Imtrade Cougar Selective Herbicide with other herbicides, drop yellowing may be enhanced. When mixing with 375 g/L Diclofop-Methyl as EC, 110 g/L Fenoxaprop-P-Ethyl as EC, 69 g/L FENOXAPROP-ETHYL as EW or 250 g/L DICLOFOP-METHYL + 13 g/L FENOXAPROP-P-ETHYL as EC, some reduction in the efficacy and speed of action of these products may occur.

When mixing with Targa® or Fusilade® some reduction in the efficacy and speed of action of these products and Imtrade Cougar Selective Herbicide may occur.

In tank-mixtures with Ally® and Glean®, rates of Imtrade Cougar Selective Herbicide higher than 500 mL/ha may cause significant crop damage.

If the crop is stressed, the application of the herbicide tank-mixtures may cause yield reduction.

When mixing with Cadence® a temporary wilting may be evident in some crops after application.

The mixture of Imtrade Cougar selective Herbicide and Simazine should be applied during winter to lucerne which is not actively growing. This mixture may result in an increased crop effect but this can be reduced in the lucerne is grazed or cut before spraying.

DO NOT mix Imtrade Cougar Selective Herbicide with Verdict®.

Growers should seek advice before spraying recently released cereal varieties.

Use the recommended rates for Imtrade Cougar Selective Herbicide and its tank-mix partner as well as the surfactant recommendation of the tank mix partner. Read the label of the tank-mix partner before mixing and using the tank mixture. If another herbicide is applied as a tank mix, observe the plantback restrictions on that label.

WARNING

DO NOT use crop oils with Imtrade Cougar Selective Herbicide or Imtrade Cougar Selective Herbicide tank mixtures in Cereals.

As formulations of other manufacturers' products are beyond the control of Imtrade Australia Pty Ltd, all mixtures should be tested prior to mixing commercial quantities.
