Tigrex®
SELECTIVE HERBICIDE

ACTIVE CONSTITUENTS: 250 g/L MCPA AS THE 2-ETHYLHEXYL ESTER
25 g/L DIFLUFENICAN

SOLVENTS: 311 g/L LIQUID HYDROCARBONS
150 g/L N-METHYL-2-PYRROLIDONE

GROUP F II HERBICIDE

For the control of certain broadleaf weeds in winter cereals and clover as specified in DIRECTIONS FOR USE table

5L, 10L, 20L, 100L, 110L, 1000L
IMPORTANT: READ THE ATTACHED BOOKLET BEFORE USE

TIGREX SELECTIVE HERBICIDE**STORAGE AND DISPOSAL (5 L, 10 L and 20 L containers)**

Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight.

Triple or preferably pressure rinse containers before disposal. Add rinsings to the spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the empty containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt. Do not reuse container for any other purpose.

STORAGE AND DISPOSAL (110 L returnable containers)

Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight.

If tamper evident seals are broken prior to initial use then the integrity of the contents cannot be assured.

Empty container by pumping through dry-break connection system. Do not attempt to breach the valve system or the filling point, or contaminate the container with water or other products. Ensure that the coupler, pump, meter and hoses are disconnected, triple rinsed and drained after each use. When empty, or contents no longer required, return the container to the point of purchase. This container remains the property of Bayer CropScience Pty Ltd.

STORAGE AND DISPOSAL (1000 L minibulk container)

Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight.

If tamper evident seals are broken prior to initial use then the integrity of the contents cannot be assured. Empty product as required into application equipment. Do not attempt to breach the valve system or filling point, or contaminate the container with water or other products. Ensure that equipment used in transfer of the product is disconnected, triple rinsed and drained after each use. When the container is empty, close all caps and valves and return the container to the point of purchase.

SAFETY DIRECTIONS

Harmful if swallowed. Will damage the eyes. Will irritate the skin. Avoid contact with eyes and skin. DO not inhale vapour. When opening the container, preparing the spray and using the prepared spray, wear cotton overalls buttoned to the neck and wrist, washable hat, elbow length PVC gloves and face shield or goggles. If product in eyes, wash it out immediately with water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each day's use wash gloves, face shield or goggles and contaminated clothing.

FIRST AID

If poisoning occurs contact a doctor or Poisons Information Centre (telephone 13 11 26). If swallowed, DO NOT induce vomiting. Give a glass of water. If in eyes, wash out immediately with water.

MATERIAL SAFETY DATA SHEET

WEEDS LIST

WEED (Common name)	(Scientific name)	PAGE NO.
Canola (rape)	<i>Brassica napus</i>	X
Capeweed	<i>Arctotheca calendula</i>	X
Charlock	<i>Sinapis arvensis</i>	X
Chickweed	<i>Stellaria media</i>	X
Common sowthistle (milk thistle)	<i>Sonchus oleraceus</i>	X
Corn gromwell	<i>Buglossoides arvensis</i>	X
Cowvine	<i>Ipomoea longiphylla</i>	X
Crassula	<i>Crassula spp.</i>	X
Deadnettle	<i>Lamium amplexicaule</i>	X
Dense-flower fumitory	<i>Fumaria densiflora</i>	X
Dock	<i>Rumex spp.</i>	X
Doublegee (spiny emex)	<i>Emex australis</i>	X
Fat hen	<i>Chenopodium album</i>	X
Fireweed	<i>Senecio spp.</i>	X
Fumitory	<i>Fumaria spp.</i>	X
Hedge mustard	<i>Sisymbrium officinale</i>	X
Hexham scent (King Island melilot)	<i>Melilotus indicus</i>	X
Horehound	<i>Marrubium vulgare</i>	X
Hyssop loosestrife	<i>Lythrum hyssopifolia</i>	X
Iceplant	<i>Mesembryanthemum spp.</i>	X
Indian hedge mustard	<i>Sisymbrium orientale</i>	X
London rocket	<i>Sisymbrium irio</i>	X
Long storksbill	<i>Erodium botrys</i>	X
Marshmallow	<i>Malva parviflora</i>	X
Mouse-eared chickweed	<i>Cerastium glomeratum</i>	X
Night-scented stock	<i>Matthiola longipetala</i>	X
Paterson's curse	<i>Echium plantagineum</i>	X
Peppercress	<i>Lepidium spp.</i>	X
Prickly lettuce	<i>Lactuca serriola</i>	X
Purple goosefoot	<i>Scleroblitum atriplicinum</i>	X
Rough poppy	<i>Papaver hybridum</i>	X
Saffron thistle	<i>Carthamus lanatus</i>	X
Scarlet pimpernel	<i>Anagallis arvensis</i>	X
Shepherd's purse	<i>Capsella bursa-pastoris</i>	X
Skeleton weed	<i>Chondrilla juncea</i>	X
Sorrel	<i>Rumex spp.</i>	X
Stemless thistle	<i>Onopordum acaulon</i>	X
Toad rush	<i>Juncus bufonius</i>	X
Tree hogweed	<i>Polygonum patulum</i>	X
Turnip weed	<i>Rapistrum rugosum</i>	X
Variegated thistle	<i>Silybum marianum</i>	X
Vetch (tares)	<i>Vicia sativa</i>	X
Volunteer lupins	<i>Lupinus spp.</i>	X
Ward's weed	<i>Carrichtera annua</i>	X
Wild radish	<i>Raphanus raphanistrum</i>	X
Wild turnip	<i>Brassica tournefortii</i>	X
Wireweed (hogweed)	<i>Polygonum aviculare</i>	X

BOOKLET (continued)**DIRECTIONS FOR USE****Restraints**

DO NOT apply if crop or weeds are stressed due to dry or excessively moist conditions.

DO NOT apply to crops under stress due to disease or insect damage.

DO NOT apply to frost-affected crops or if frosts are imminent.

DO NOT apply when heavy rain is expected within 4 hours.

CROP	WEEDS CONTROLLED	STAGE OF WEED GROWTH	STATE	RATE /HA	CRITICAL COMMENTS
CEREALS Wheat, barley, oats, triticale, cereal rye (including cereals undersown with clover)	Wild radish	Up to the 2 leaf stage and not more than 60 mm in diameter	WA only	250 mL	CROP STAGE <i>Cereals</i> Up to 750 mL (3 leaf to fully tillered stage - Z13 to 30)
		Up to the 4 leaf stage and not more than 120 mm in diameter	All States	500 mL	Over 750 mL (5 leaf to fully tillered stage - Z15 to 30)
		Up to the 6 leaf stage and not more than 150 mm in diameter		750 mL	Optimum results are achieved when sprayed at 3-5 leaf crop stage (generally 4-8 weeks post sowing).
		Up to the 8 leaf stage and not more than 180 mm in diameter		1.0 L	WA only: DO NOT apply to Barley or Kulin Wheat before the 5 leaf stage (Z15). Warning: Tigrex may cause transient crop yellowing of cereals. Some varieties of oats have not been tested. (Refer to "Crop Tolerance" section of General Instructions)
	Charlock, hedge mustard, Indian hedge mustard, shepherd's purse, turnip weed, wild turnip	Up to the 2 leaf stage and not more than 60 mm in diameter		500 mL	Clover Application is recommended prior to the eighth trifoliolate leaf stage, however, applications prior to the third leaf stage may result in crop damage especially under stressed conditions and in sandy soils.
		Up to the 4 leaf stage and not more than 120 mm in diameter		750 mL	DO NOT apply to Annual Medics or lucerne. Warning: Tigrex may cause transient crop yellowing of clover, and may affect growth and seed set of some varieties of clover. (Refer to "Crop Tolerance" section of General Instructions).
		Up to the 6 leaf stage and not more than 150 mm in diameter		1.0 L	
	London rocket	Up to the 5 leaf stage and not more than 120 mm in diameter	Qld only	750 mL	
	Ward's weed		SA only		
	Capeweed	Up to the 2 leaf stage and not more than 60 mm in diameter	All States	500 mL	
		Up to the 4 leaf stage and not more than 120 mm in diameter		1.0 L	
PASTURE Newly sown and established clover- based pasture, clover for hay and seed production	Crassula	Up to the 2 leaf stage		500 mL	WEED STAGE Apply when weeds are actively growing. In most situations the rate specified for each weed size will give satisfactory control.
		Up to the 4 leaf stage		750 mL	Under certain conditions such as: * high crop and weed density
	Prickly lettuce	Up to the 2 leaf stage		500 mL	* late season germinations
		Up to the 4 leaf stage		750 mL	* abnormal weed growth (including early flowering),
		Up to the 6 leaf stage		1.0 L	higher rates of product (up to the maximum rate of application specified for that weed) may be required.
	Dense-flower fumitory	Up to the 2 leaf stage		750 mL	Tigrex will not effectively control: * regrowth of suppressed weeds;
	Corn gromwell, saffron thistle, toad rush			1.0 L	* transplanted weeds;
	Deadnettle		NSW, Vic, SA only		* regrowth from rhizomes or roots;
					* weeds growing under stress from previous herbicide applications

CONTINUED OVERLEAF

BOOKLET (continued)

CROP	WEEDS CONTROLLED	STAGE OF WEED GROWTH	STATE	RATE/ HA	CRITICAL COMMENTS
CEREALS Wheat, barley, oats, triticale, cereal rye (including cereals undersown with clover)	Sorrel	Up to the 2 leaf stage	Vic only	1.0 L	CONTINUED FROM PREVIOUS PAGE
	Canola (rape)	Up to the 4 leaf stage	All States	500 mL	
	Purple goosefoot	Up to the 6 leaf stage	Qld only	500 mL	
PASTURE Newly sown and established clover based pasture, clover for hay and seed production	Turnip weed, wild turnip	Cotyledon to 2 leaf stage	NSW only (West of Newell Hwy.) SA only (Eyre peninsula north of the line between Venus Bay and Cowell)	350 mL	GRAZING Efficacy on larger weeds will be improved by grazing with normal levels of stock after the 7 day withholding period. Refer to 'Protection of Livestock' for grazing precautions.
CEREALS Wheat, barley, oats, triticale, cereal rye	Fumitory	2 - 6 leaf stage	All States	500 mL + 200 mL terbutryn (500 g/L)	APPLICATION Activity of this product will be reduced if weeds are stressed. Optimum results will be obtained if good soil moisture exists at and after application. Where crop or weed density is high, water volume should be increased.
CEREALS Wheat, barley, oats, triticale, cereal rye (including cereals undersown with clover)	SUPPRESSION OF THE FOLLOWING WEEDS				WILD RADISH Tigrex will provide residual control of Wild Radish for up to 4 weeks after application. Effective residual activity of this product may be reduced where: * rates lower than 1.0 L/ha are used; * dry conditions prevail; * poor coverage of the soil surface is achieved; * crop is planted in non-wetting sand; * soils contain a high content of organic matter. Optimum results will be obtained if good soil moisture exists at and after application.
PASTURE Newly sown and established clover based pasture, clover for hay and seed production	Saffron thistle	Up to the 6 leaf stage	All States	1.0 L	
	Chickweed, fireweed, hexham scent (King Island melilot), iceplant, mouse-eared chickweed, night-scented stock, Paterson's curse, peppercress, skeleton weed, long storksbill, volunteer lupins	Up to the 4 leaf stage		750 mL	
	Wireweed (hogweed)	Up to the 2 leaf stage		1.0 L	
	Common sowthistle (milk thistle), cowvine, dock, doublegee (spiny emex), fat hen, horehound, hyssop loosestrife, marshmallow, rough poppy, scarlet pimpernel, stemless thistle, tree hogweed, variegated thistle, vetch (tares)				

CROP	WEEDS CONTROLLED	STAGE OF WEED GROWTH	STATE	RATE/ HA	CRITICAL COMMENTS
CEREALS Wheat, barley, oats, triticale, cereal rye	Wild radish	Up to the 4 leaf stage and not more than 120 mm in diameter	All States	350 mL plus 200 mL MCPA LVE (500 g/L)	Refer also to all Critical Comments relating to weed stage, grazing, application and wild radish above.
		Up to the 6 leaf stage and not more than 150 mm in diameter		500 mL plus 200 mL MCPA LVE (500 g/L)	* Reduced efficacy (suppression only) may be achieved on wild radish larger than 8 leaf or greater than 180 mm in diameter.
		Up to the 8 leaf stage and not more than 180 mm in diameter*		500 mL plus 400 mL MCPA LVE (500 g/L)	DO NOT use this tank-mix if cereals are undersown with lucerne or annual medics. <u>Crop Stage</u> Tigrex 350 mL + MCPA LVE 200 mL: Apply from 3 leaf to fully tillered (Zadok's Z13 to Z30). Tigrex 500 mL + MCPA LVE 200 mL: Apply from 3 leaf to fully tillered (Zadok's Z13 to Z30). Tigrex 500 mL + MCPA LVE 400 mL: Apply from 5 leaf stage to fully tillered (Zadok's Z15 to Z30). Optimum results are achieved when sprayed at 3-5 leaf crop stage (generally 4-8 weeks post sowing). WA only: DO NOT apply to Barley or Kulin Wheat before the 5 leaf stage (Z15). Warning: Tigrex may cause transient crop yellowing of cereals. Some varieties of oats have not been tested. (Refer to "Crop Tolerance" section of General Instructions) Observe instructions also on MCPA LVE product label.

**NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL
UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

WITHHOLDING PERIODS

CROP HARVEST: NOT REQUIRED WHEN USED AS DIRECTED

All crops: DO NOT GRAZE OR CUT FOR STOCK FOOD FOR 7 DAYS AFTER APPLICATION

GENERAL INSTRUCTIONS

Resistant Weeds Warning

Tigrex is a member of the phenoxy and nicotinanilide groups of herbicides and acts by inhibiting carotenoid biosynthesis and disrupting plant cell growth. For weed resistance management Tigrex is both a Group F and a Group I herbicide. Some naturally occurring weed biotypes resistant to Tigrex and other Group F and I herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by Tigrex or other Group F or Group I herbicides. Since the occurrence of resistant weeds is difficult to detect prior to use, Bayer CropScience accepts no liability for any losses that may result from the failure of Tigrex to control resistant weeds.

GROUP	F	I	HERBICIDE
-------	---	---	-----------

BOOKLET (continued)**Tolerance**

Some pre-emergence herbicides, such as atrazine, can cause stress to certain crops resulting in an increase in crop damage when using this product. Subterranean clover is particularly sensitive.

Cereals

After application some transient crop yellowing may occur. This usually appears as yellow or white banding on leaves. Provided the crop is not under stress from pre-emergent herbicide, root disease, insect damage, frost, dry or excessively moist conditions, the development of the crop and subsequent growth will be unaffected.

Warning (Oats)

The tolerance of oat varieties Esk and Nile (the two main varieties grown in Tasmania) to Tigrex has not been tested. Test a small area of crop before using Tigrex over large areas. Consult your local Bayer CropScience representative for advice on specific varieties.

Pasture

The tolerance of clover varieties to Tigrex can vary with rate of application, soil type, crop health, stage of growth and degree of moisture and temperature stress.

Warning

Tigrex may result in transient crop yellowing and suppression of growth with a resultant initial reduction in dry matter, particularly at rates in excess of 500 mL/ha and in areas of double spray. For this reason we recommend application prior to the 8 trifoliate leaf stage. However, at the lower rates (500 mL/ha and less) and under normal growing conditions, subsequent growth and seed yield should not be affected.

Under normal growing conditions, the following varieties have shown acceptable levels of foliage tolerance to Tigrex applied at 500 mL/ha:

ArrowLeaf: Zulu

Balansa: Paradana

Berseem: Sacromonte

Persian: Kyambro, Lupers, Maral

White: Haifa

Subterranean clover: Daliak, Dalkeith, Denmark, Esperance, Geraldton, Goulburn, Karridale, Larissa, Leura, Mt.Barker, Nungarin, Rosedale, Seaton Park, Trikkala and Woogenellup.

The effects of Tigrex on clover seed yield have been tested on the following varieties. Under normal growing conditions they show acceptable levels of tolerance to Tigrex applied at 500 mL/ha:

Subterranean clover: Esperance, Goulburn, Larissa, Seaton Park and Trikkala.

Warning

Rose and Strawberry clover have shown increased sensitivity to Tigrex. Tigrex may affect the seed yield of subterranean clover variety Woogenellup.

Some pasture grasses, including Phalaris and Cocksfoot, may show some initial reduction in vegetative growth after application of Tigrex.

Care should be exercised if sensitive clover varieties or grasses are included in the pasture sward.

Varieties not listed should be tested before using Tigrex over large areas. Consult your local Bayer CropScience representative for advice on specific varieties.

BOOKLET (continued)***Subsequent Crops***

To reduce effect on subsequent susceptible crops (e.g. canola), ensure thorough cultivation of soil prior to the sowing of these crops.

Mixing

To ensure even mixing, half fill the spray tank with clean water and add the required amount of product. Agitate thoroughly then add the remainder of the water. Agitate again before spraying commences. Reseal part-used product container immediately after use. Spray mixtures containing Tigrex should not be left to stand overnight. Prolonged periods of exposure to cold temperatures could result in settling out of the product in the mixture. The use of extremely cold water for mixing with Tigrex has occasionally led to the build-up of product on the spray-rig filters. To greatly reduce the incidence at which this occurs avoid the use of extremely cold water if possible.

Warning

The rubber components present in some spraying units may be affected by exposure to the solvents in Tigrex and some other agricultural products. To reduce this risk it is recommended that the spray unit be thoroughly washed with a boom cleaner and fresh water after use. Contact the spray unit manufacturer to determine the suitability of the rubber components for use with agricultural products.

Application***Boom Sprayer***

A minimum of 50 L of water per hectare should be used, however, for optimum results water rates of 70-100 L/ha are recommended. Increase the water volume if weed infestation is heavy or crop cover is dense. Complete coverage of weeds is essential.

Aircraft (NSW, Vic, SA only)

Apply in a minimum of 30 L water per hectare. Effective weed control will only be achieved where good coverage of leaf surface is achieved.

Compatibility

The following products are physically compatible with Tigrex as a two-way mixture in the spray tank but should only be used for the crops specified:

Crop	Tigrex®	Compatible Product
Wheat, triticale and cereal rye only	Up to 750 mL/ha	Hoegrass® (also barley), Tristar® Advance (1.5 L rate only), Wildcat® (wild oats only)
Cereals (including undersown)	All rates	Chlorpyrifos (500 g/L), dimethoate, Thiodan®.
Cereals (not undersown)	Up to 500 mL/ha	Ally®, Glean®, MCPA LVE, Logran®
	All rates	Bromoxynil 200 g/L, 2,4-D Amine 500 Herbicide, Lontrel®, Tordon® 50-D, Cadence® (up to 115 g only), Eclipse®
Wheat, barley, triticale, and cereal rye only (not undersown)		Achieve®
Wheat only (not undersown)		Topik®
Clover	Up to 750 mL/ha	Targa®, Fusilade®
Subterranean clover		Simazine (500 g/L), simazine (500 g/L) + paraquat (200 g/L) mixture
	Up to 1.0 L/ha	2,4-DB amine (500 g/L)

BOOKLET (continued)

When mixing with other herbicides, crop yellowing may be enhanced. When mixing with Hoegrass, Wildcat or Tristar Advance some reduction in the efficacy and speed of action of these products may occur. If the crop is stressed, the application of the herbicide tank-mixtures may cause yield reduction. When mixing with Cadence a temporary wilting may be evident in some crops after application. Growers should seek advice before spraying recently released cereal varieties.

Use the recommended rates for both herbicides in the tank-mixture as well as the surfactant recommendation of the grass herbicide. If another herbicide is applied as a tank mix, observe the plantback restrictions on that label. DO NOT add surfactant when mixing Tigrex and Ally.

Simazine: Refer to the simazine label for correct application rates, especially with regard to soil types.

This product may be mixed in the spray tank with one of the following insecticides according to the directions for use on this product: Hallmark® 50EC, Dominex® 100EC, Karate®, Decis Options®, and Talstar®.

Warning

DO NOT use crop oils with Tigrex or Tigrex tank mixtures with other products in cereals.

As formulations of other manufacturer's products are beyond the control of Bayer CropScience, all mixtures should be tested prior to mixing commercial quantities.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS

DO NOT apply under weather conditions, or from spraying equipment, that may cause drift onto nearby susceptible plants/crops, cropping lands or pastures. Avoid spray drift and vapour movement onto susceptible crops such as cotton, tobacco, tomatoes, vines, lupins, fruit trees and ornamentals.

PROTECTION OF LIVESTOCK***Grazing Precaution***

Sprayed weeds may become more palatable to stock and a higher intake of some weeds may result in stock poisoning and death from causes such as nitrate poisoning. Care should be taken especially where capeweed, Paterson's curse and variegated thistles predominate in the pasture. Avoid grazing with young or breeding stock. Do not graze horses or pigs on Paterson's curse. If in doubt, contact your nearest Department of Agriculture.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

Dangerous to fish. DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

Decis Options®, Eclipse®, Hoegrass®, Thiodan®, Tigrex®, Tristar® and Wildcat® are Registered Trademarks of Bayer.
